

Co-funded by the Erasmus+ programme of the European Union

Building Innovative Tools for the Exchange of Information and Awareness Raising Against Match-Fixing in Sport.

GUIDE OF GOOD PRACTICES ON THE FIGHT AGAINST MATCH-FIXING

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

BUILDING INNOVATIVE TOOLS FOR THE EXCHANGE OF INFORMATION AND AWARENESS RAISING AGAINST MATCH-FIXING ON SPORT (BITEFIX)

WORK PACKAGE 2: FRAMEWORK & GOOD PRACTICE IO1: GUIDE OF GOOD PRACTICES ON THE FIGHT AGAINST MATCH-FIXING

- 1 Presentation. Sport takes an increasing place in our societies, whatever the continent orcountry in mind.apprehended. A factor of peace or even reconciliation between people, it participates in particular, in the cognitive development of children, represents a factor of emancipation and hope for many groups of people or communities and fascinates billions of people around the world.
- 2 The stakes linked to sport now go well beyond the framework of games. They are of a societal, political and economic nature. However, as sport acquires ever greater importance in our societies, ever more complex problems linked to new technologies and globalisation tend to call into question the virtuous image with which it adorns.
- **3** These multifaceted problems relate mainly to a scourge: the manipulation of sports competitions. Indeed, behind this expression, there is a financial motivation that can lead to doping, corruption and all forms of violence. And in the absence of a well-defined legal framework, the manipulation of sports competitions can become a problem beyond all control and liable to corrupt all or at least a large part of the training and competitions linked to a sport.
- 4 However, there is no common international legal framework for the fight against sports manipulation to which all States have adhered, nor is there an international treaty related to the regulation of new technologies. It is therefore still largely organised within a national framework (despite remarkable initiatives such as the Macolin Convention on the manipulation of sports competitions of the Council of Europe, which we will address below).
- 5 Nevertheless, this observation does not mean that States are developing their system in autarky, without consultation or discussion. On the contrary, in the era of globalisation, the exchange of information on good practices established by a given State tends to develop/ increase? (e.g. MOUs between certain gambling regulatory authorities in order to exchange views on the regulation of sports betting) and is also an essential issue for various reasons, whether at regional or global level. First of all, it appears regrettable that a State develops effective regulatory mechanisms against the manipulation of sports competitions without, however, sharing its best practices with States experiencing similar problems. Then, sharing these mechanisms could save precious

time for the State, which has no legislation on the subject; this time factor is all the more important in the age of new technologies as a delay of a few months in setting up a mechanism can be enough for a criminal organisation to develop a sprawling and complex system. Finally, the sharing of good practices is the best way to level the fight against the manipulation of sports competitions qualitatively and more consistently while limiting the risks of a criminal organisation doing forum shopping by setting up in countries that would have legal loopholes, inefficient systems or to take advantage of discrepancies between states.

- **6** In that respect, this project was carried out with funding from the European Commission. The objective is not to determine a uniform legal framework but rather to identify certain good practices in the fight against the manipulation of sports competitions which could benefit the greatest number without denying the cultural specificities of each state.
- 7 Plan. To this end, various general tables relating to specific crimes have been drawn up in order to determine the States having legislation, regulations or codes of conduct. The establishment of these tools has been of essential help to us in understanding the legislative orientations of each State and in attempting to carry out an effort of systematisation allowing us to know those who are at the forefront of the fight against such a scourge likely to share their good practices with those who have fallen behind on these issues.
- 8 Our research work thus focused initially on an inventory of the systems put in place by the Member States relating to the fight against the manipulation of sports competitions (I). This led us to understand the mechanisms and tools at European (II) and international (III) level aimed at combatting this scourge.

I. NATIONAL LEVEL

9 Objective. The results of our research relating to national legislation relating to the fight against the manipulation of sports competitions (A), then other hard law texts (B), good soft law practices will be presented. (C) and information exchange platforms relating to the fight against this scourge (D). Finally, this work cannot be complete without adding to it the state of play in terms of legislation relating to the protection of personal data (E).

A. REGULATION AT NATIONAL LEVEL ON THE FIGHT AGAINST MATCH-FIXING

Keys words (for each country): Law, decree, corruption in sport, match-fixing, sport betting, online betting, national platform, protection on personal data This research has to be focused on Ministries in charge of this subject in the jurisdiction.

10 Assessment. From a methodological point of view, our research work was carried out on the websites of the national authorities competent to deal with questions relating to the manipulation of sports competitions. Also, we have encountered difficulties due to the lack of translation of certain legislation into one of the working languages of the Union, while the Netherlands does not offer free access to all of their legislation. Finally, Romania and Slovakia do not have legislation on the manipulation of sports competitions.

Our research work has focused on two directions: corruption in sport and sports betting. In this regard, we have on the one hand observed that the relative majority of States (they are 15: Austria, Belgium, Bulgaria, Cyprus, France, Germany, Hungary, Italy, Latvia, Malta, Poland, Portugal, Spain, Sweden, United Kingdom) has legislation on these two issues and most of them are separate pieces of legislation (this distinction is found in 11 states; only Germany, Cyprus, Spain and Hungary have legislation dealing with the two subjects together). On the other hand, the majority of States prefer to base their device for preventing the manipulation of sports competitions around measures relating to corruption in sport (7 States have made this choice: Croatia, Denmark, Estonia, Finland,

Greece, Rep. Czech, Slovenia). Finally, Ireland, Luxembourg, Lithuania, and the Netherlands only have legislation relating to sports betting.

B. OTHER RELEVANT SOURCES ON MATCH FIXING AT NATIONAL LEVEL

Keys words (for each country): Law, decree, corruption in sport, match-fixing, sport betting, online betting, national platform, protection on personal data

- **11** Our research has enabled us to highlight that a state majority within the European Union (There are 15 of them: Germany, Austria, Belgium, Finland, France, Greece, Latvia, Lithuania, Luxembourg, Poland, Slovakia, Slovenia, Spain, Sweden plus the United Kingdom, a partner in this project), have set up a platform for the exchange of information between the stakeholders of the sports movement in order to fight more effectively against the manipulation of sports competition.
- 12 The Council of Europe Convention on the manipulation of sports competitions of 2014 (Macolin Convention) has played an essential role in this development by encouraging States Parties to put this tool in place. Thus, the platforms were for the most part established in 2016 and 2020. Only Austria will have equipped itself with such a tool before the adoption of the Macolin Convention (2012). However, a large minority of States (there are 13 of them: Bulgaria, Croatia, Cyprus, Czech Rep., Denmark, Estonia, Hungary, Ireland, Italy, Portugal, Malta, the Netherlands, Romania) do not have equivalent tool; which is detrimental to cross-border cooperation.

A. REGULATION/ GOOD PRACTICE AT NATIONAL LEVEL ON THE PROTECTION OF PERSONAL DATA

Keys words (for each country): national authority, protection on personal data, expert group. This research has to be focused only on the national platform in charge of the protection on personal data.

13 Research concerning national systems relating to the protection of personal data does not import specific remarks as much as the States have applied the General Data Protection of Personal Data (GDPR) (e.g. Germany, Austria, Croatia, Sweden) or have either clarified its meaning through a communication from their competent regulatory authority (Belgium, Hungary, Spain). Almost all national legislation (with the exception of the Netherlands) is therefore recent on the subject. The texts having been disseminated between 2015 and 2019.

II. EUROPEAN AND REGIONAL LEVEL

14 Announcement. We first identified the European initiatives aimed at effectively combatting the manipulation of sports competitions (A), then we focused secondly on the European regulation relating to personal data (B). Finally, we identified in a third step, the Erasmus projects related to the protection of the integrity of sport (C).

A. REGULATION/ INTERVENTION AT EUROPEAN LEVEL ON THE FIGHT AGAINST MATCH-FIXING

- **15 Assessment.** The most important text adopted in Europe in the fight for the integrity of sport remains the Council of Europe Convention on the manipulation of sports competitions of 2014 (Macolin Convention). Beyond this essential text, it should be noted that the two main European regional organisations have been interested since the 2000s in dealing with this problem.
- 16 This awareness coincides with the integration of sport among the shared competences of the European Union endorsed by the TFEU (Treaty of Lisbon of 2007). From this date, the initiatives of the European institutional triangle will multiply without leading to the dissemination of a directive or a regulation. The two main institutions initiating movement are the Commission and the Parliament which will publish various soft law texts, sometimes by supporting their respective initiatives, sometimes by supplementing their proposals.
- 17 Beyond the initiatives of the committee and the Parliament on sport and its European dimension published between 2007 and 2011, which aimed to carry out an inventory of sport in Europe, its specific features and the objectives that could be set the European Union in order to contribute to its development in accordance with the framework of the TFEU, these institutions mainly focused initially on two emerging issues at the turn of the 2010s: the integrity of sport and the treatment of gambling and online sports betting.
- 18 In this regard, the first initiative is to be credited to the Council of the European Union, which produced a report aiming to take stock of legislation on online gambling and betting in Europe (2008). A new report will follow which will aim to identify avenues for cooperation between Member States on this subject (2011). Parliament will support this initiative with a resolution on online betting integrity. But, it is the European Commission, which will define the legal framework for European intervention in the field of online gambling with its Green Paper on online gambling within the internal market which confirms the case law. Santa Casa and takes up certain proposals from the Council of the Union and the Parliament. The two guiding principles of this Green Paper are cooperation and subsidiarity (2011).
- 19 Concurrently, following the Council of Europe recommendation on the promotion of the integrity of sport (2008), the committee carried out a valuable study which mapped the penal systems of member states in the fight against manipulation of sports competitions (2012). This initiative was followed by the Parliament's resolution on organised crime, corruption and money laundering which proposes recommendations on the actions and initiatives that should be taken in this area (2012), a resolution which integrates sport among sectors affected by organised crime.

20 Secondly, from the mid-2010s, concerns related to good governance (which refers to various issues relating in particular to gender equality or inclusion) in major sporting events will begin to emerge at the instigation of Council of Europe conclusions on the subject (2016). Good governance will from this time, be associated with the integrity of sport with a guiding principle linking the structuring notions of modern sport: transparency. The European Parliament will deepen these initial reflections with a resolution broadening the spectrum of analysis to all sports policies (2017). Following this first series of work, the Council of Europe attempted to lay the foundations for a modern sports governance framework including, in particular, concerns relating to the protection of the integrity of sport.

| 2010 | European Commission | COM (2010) 609: COMMUNICATION FROM THE COMMISSION TO THE EUROPEAN PARLIAMENT, THE COUNCIL, THE ECONOMIC AND SOCIAL COMMITTEE AND THE COMMITTEE OF THE REGIONS A comprehensive approach on personal data protection in the European Union | Communication | <u>LINK</u> |
| 2016 | European Parliament | REGULATION (EU) 2016/679 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation) | Regulation | <u>LINK</u> |

B. REGULATION AT EUROPEAN LEVEL ON THE PROTECTION ON PERSONAL DATA This research has to be focused on European Institutions (+ expert group) + Council on Europe

- **21** In terms of personal data protection, the last few years have been marked by the European general regulation on the protection of personal data (2016), which followed the communication from the commission aiming to determine the main orientations of the future regulation (2010).
- 22 The objective of this new text was to overhaul the first European regulation on the protection of personal data (1995) by taking into account the new issues relating to new technologies. This new version revolves around four objectives: significantly strengthen the rights of citizens by giving them more control over their personal data, give credibility to data regulation through a system of penalties, establish new rights for nationals of the European Union (eg: right to the portability of personal data, right to be forgotten) and finally to empower the actors processing the data.
- **23** These complex and sensitive subjects are of particular interest to athletes, especially when it comes to linking them with devices related to doping, which constitutes a form of manipulation of sports competitions. It also covers issues related to corruption.
- **24** Personal data is therefore a key element in the fight for the integrity of sport and in many ways the limit to the principle of transparency which is one of the foundations in the fight over the manipulation of sports competitions.

From the mid-2010s, the stakeholders of the sports movement revised, as an extension of European initiatives, the issues underlying the integrity of sport. Our research shows that the projects developed within the framework of Erasmus fell into two complimentary directions: on the one hand, educational programs aimed at preventing and raising awareness of the various issues relating to the manipulation of sports competitions, and on the other hand, the development of tools likely to put an end or

at least to restrict the scope of this scourge. In addition, the stakeholders targeted are diverse and some projects are aimed at only a limited number of countries.

- **25** First of all, these projects have an educational aim and offer programs aimed at sensitising stakeholders, and first and foremost coaches and athletes, to the integrity of sport through various simulation programs. These projects are based on the creation of tools or the sharing of experience with stakeholders involved in this issue. A project sanctions training with the degree of Master in sports integrity. The completeness of sport integrity training in Europe is therefore unparalleled in the world.
- **26** Next, projects relating to the protection of the integrity of sport are just as diverse. They may be aimed at helping States to strengthen the efficiency of their systems in the fight against the manipulation of sports competitions. It also targets the sports movement and primarily sports organisations. Some therefore propose to establish a guide to good governance addressed to the national Olympic committees and European sports organisations, to set up points of contact within them which would aim to monitor the integrity of sport. It can also be a tool to strengthen transparency in the governance of sports organisations. These projects also offer initiatives that directly target athletes with the establishment of alert systems, the sharing of experience with sports influencers on this subject or the creation of a telephone application allowing professional athletes to report. integrity issues.

III. INTERNATIONAL LEVEL

- 27 Introductory. Like the two previous parts, we tried to identify at International level the treaties (A) as well as the good practices relating to the fight against the manipulation of sports competitions (C), and the initiatives on international rules relating to the protection of personal data (B).
- **28** Without being successful, this research has not produced fruitful results. The reason is to be found in the difficulty of finding a consensus at International level on a problem outside the framework of any international organisation.

| | A. REGULATION AT INTERNATIONAL LEVEL ON THE FIGHT AGAINST MATCH-FIXING Keys words: Regulation, Corruption in sport, match-fixing, sport betting. This research has to be focused on International convention on this subject. | | | | | | |
|------|---|--------------------------|-------------------------|------|---------|-------------------------|--|
| Date | Source | Title of the document | Type of the document | Link | Betting | Corruption in Sports | |

| 2000 | UNODC | United Nations Convention against Transnational Organized Crime and the Protocols Thereto | Treaty | <u>LINK</u> | |
|------|-------|---|--------|-------------|--|
| 2003 | UNODC | United Nations Convention against Corruption | Treaty | <u>LINK</u> | |

- **29 Analysis.** Two major texts have been identified at International level and they are unsurprisingly at the initiative of a United Nations body, the United Nations Office on Drugs and Crime (better known by the English acronym UNODC) which opened for ratification two corresponding conventions aimed at combatting actions that could affect the integrity of sport.
- **30** The first is the United Nations Convention against Transnational Organised Crime and related protocols of 2003 (known as the Palermo Convention), which has as its object the fight against money laundering, which is one of the most important causes of manipulation of sports competitions. This treaty is a success as 147 states have signed it and 40 have ratified it.
- **31** The second is the 2003 United Nations Convention against Corruption aimed at combatting organised crime. As the first global instrument in the fight against this problem, the implementation of which is monitored by the International Anti-Corruption Academy, it has been ratified by 187 States (only 11 signatories have not yet incorporated it into their law).
- **32** Together, these two texts lay the foundations for at least common mechanisms for combatting money laundering and organised crime, in particular through the establishment of rules organising international cooperation. The consensus reached on the definition of transnationality of the offense is also a necessary prerequisite capable of combatting these scourge more effectively.

| B. REGULATION AT INTERNATIONAL LEVEL ON THE PROTECTION ON PERSONAL DATA | | | | | | | |
|---|--|--|--|--|--|--|--|
| | | | | | | | |

| Date | Source | Title of the document | Type of the document | Link |
|------|--------|--------------------------|----------------------|------|
| | | | | |
| | | | | |
| | | | | |

- Finding. Beyond the GDPR, there is no initiative at the regional level and even less at the international level that could protect personal data. Despite the need to determine a common framework to ensure the protection of the personal data of users of new technologies, cultural differences or even points of view remain major obstacles to the establishment of such a tool. The comparison between the United States and the European Union is in this regard a symptomatic example of the multiple difficulties that regions of the world may encounter in bringing their systems together in this area even though they share the same principles of respect for the privacy and data protection as attested by press release n ° 91/20 of July 16, 2020 invalidating the privacy shield, the EU-US data protection shield.
- Thus, the main US law relating to the protection of personal data does not protect individuals who are not US citizens or permanent residents. In addition, there are the limitations of the protection of personal data resulting from American legislation relating to their access and use by American public authorities, whose monitoring programs are not limited to what is strictly necessary, particularly in the assumption of data transfers from the Union to the United States.
- These differences bare witness to the difficult international adequacy of assessing the multiple criteria used to determine an appropriate framework for the protection of personal data in the era of new technologies.
